

Light Globe Spares

If you keep the following types and quantities of globes you could replace half your globes if they all failed at the same time!

1 qty halogen lamp bi-pin 12 volt 10 watt brand name Orbitec G6.35/G4 130107 H164415 G4	[these are for the reading lights. Some places may try and sell you a 12V 20W as they do not have the 10W. These globes put out a lot of heat do not do it as the lens will melt and a good possibility of fire]
2 qty single contact 2 pin 12V 3W BA9S brand name NARVA pt no 47643BL	
Pkt of two 2 qty single contact 2 pin 12V 21W auto globe clear	[same as car turn indicator lights]
1 qty wedge base 12V 3W auto globe clear	[same as glove box light]
5 qty 15 amp blade fuses blue	
2 qty festoon globes 12V 21W C15 HELLA K 12V21W37R 0011 length 1-3/4 inch 5/8 inch dia	
2 qty festoon globes 12V 18W length 1-3/4 inch 7/16 inch dia	
2 qty festoon globes 12V 6W length 1-7/16 inch 7/16 inch dia	
2 qty festoon globes 12V 5W length 1-9/16 inch 7/16 inch dia	

Sorry about the inch measurements but they are more accurate than millimeters — they still measure vans in feet. The lengths of the festoon globes are overall from point to point and the diameter is the outside diameter of the glass. Hope this helps — Regards Neil
